

# CUSTOM FLIGHTING AND AUGER MANUFACTURING

Since 1992, APEC has become known for the ability to offer customized products to meet the specific needs of a wide range of customers. We pride ourselves on the fact that we don't provide just an off-the-rack answer but design and deliver exactly what is right for you. This capability extends beyond our equipment manufacturing to an array of custom fabrication services. One of those services includes custom augers with sectional lighting that we can custom fit to your exact specifications.

Often industrial and agricultural applications require augers with lighting that is a size outside the standard augers on the market. We can form and fabricate custom augers with a variety of options for lighting sizes, pitches, and styles. Our process for manufacturing custom augers offers:

- Sectional lighting from four inches to eighteen inches in diameter
- The ability to set the lighting to the pitch from undersized to full pitch
- Lighting available includes solid or tapered
- Spun and mounted either right or left-handed
- Shaft sizes of two inches outside diameter and larger

**Let APEC's talented fabricators custom create the auger that fits your exact specifications with a reasonable lead time and without breaking the bank. Contact us for a quote on augers big and small.**
